Q6. / A6. Yes, the 'winpercent' variable appears to be on a different scale (0-100) than the majority of the other variables (0-1).

Q7. / A7. For the 'candy\$chocolate' column, a zero represents that the candy does not contain chocolate, while a one represents that the candy does contain chocolate.

Q8. / A8.

hist(candy\$winpercent)

Histogram of candy\$winpercent

Q9. / A9. No, the 'winpercent' values distribution is not quite symmetrical. There is a slight tail to the right.

Q10. / A10. The center of the distribution is below 50%, with the largest bin between 40-50%.

Q11.

mean(candy\$winpercent[as.logical(candy\$chocolate)])

[1] 60.92153

mean(candy\$winpercent[as.logical(candy\$fruity)])

[1] 44.11974

A11. On average, chocolate candy is higher ranked than fruit candy, with an average 'winpercent' value approximately 15 units higher than fruit candy.

Q12.

Q19. / A19. The highest 'winpercent' ranking with the lowest 'pricepercent' ranking is likely the Reese's Miniatures, as it is over 0.80 win percentile while still being below 0.30 price percentile. However, this answer could change based on thresholds; e.g. if someone wanted to minimize spending then they might pick a slightly lower-ranked candy with a lower pricepercent.

Q22. / A22. The two most strongly anti-correlated variables are 'chocolate' and 'fruity', which aligns with the general uncommonness of fruity chocolate candy. Other anti-correlated variables with smaller negative values include 'bar' + 'pluribus' and 'bar' + 'fruity'.

Q23. / A23. The two most strongly correlated variables appear to be 'winpercent' and 'chocolate', which aligns with our earlier analysis. Other correlated variables with smaller positive values include 'bar' + 'chocolate', as expected, and 'bar' + 'nougat'.

Q24. / A24. The variables picked up strongly by PC1 in the positive direction are fruity, hard, and pluribus, with fruity being by far the strongest. This definitely makes sense because fruity candies are mostly grouped on the right side of the plot, and chocolate candies (the most strongly negative variable for PC1) are mostly grouped on the left side. Additionally, since many fruity candies are hard candies and come in a pluribus form (bag of Skittles, etc.) it also makes sense that these should be positive along with fruity.
